

PRATHVI V SUVARNA

AI & Data Science Engineer · Final Year B.E.

+91 8792049744 · prathvisvrna@gmail.com · github.com/Prats0404 · [LinkedIn](#) · Prats0404.github.io
Udupi, Karnataka, India

PROFESSIONAL SUMMARY

Final-year B.E. AI & Data Science graduate with a strong portfolio spanning production-grade data engineering, full-stack development, and deep learning. Built a Docker-based ETL pipeline with PostgreSQL and FastAPI, a real-time Kanban SaaS with Supabase Realtime, a production Android app using MVVM + Clean Architecture, and a CNN + Transfer Learning medical image classifier. Completed a 3.5-month GenAI internship at MindMatrix (VTU MoU partner), rated EXCELLENT. Proficient in Python, SQL, TensorFlow, React, Kotlin, and Docker. Seeking a Data Science / AI role at NTT DATA to apply these skills at enterprise scale.

TECHNICAL SKILLS

Languages	Python, SQL, TypeScript, JavaScript, Kotlin, Java, C++, HTML/CSS, Dart
ML / AI	Scikit-learn, TensorFlow, Keras, CNN, MobileNetV2 (Transfer Learning), NLP (TF-IDF), Logistic Regression, Cosine Similarity
Data & Eng.	Pandas, NumPy, Matplotlib, Seaborn, Power BI, ETL Pipelines, Docker, Alembic, EDA, Statistical Analysis
Cloud & APIs	Google Cloud (GCP), Firebase, Google AI Studio (Gemini), Supabase, Azure (basics), FastAPI, REST APIs, Git
Databases	PostgreSQL, MySQL, MongoDB, Room Database (SQLite), SQL Server, DBMS, Hadoop
Dev / Mobile	React, Next.js, Node.js, Android Studio, Jetpack Compose, MVVM + Clean Architecture, Dagger Hilt, WorkManager, Streamlit

EXPERIENCE

Android App Development Intern (Generative AI)

Feb 2026 – May 2026

MindMatrix · VTU MoU Industry Partner · Online · Rated: EXCELLENT

- Designed and developed OmniSight MedX, an industry-level Android application integrating Gemini AI via Google AI Studio — combining real-time medical data display with GenAI-powered diagnostic support features.
- Built full app lifecycle using Kotlin and Jetpack Compose (design → prototype → implementation → testing → iteration), integrating Firebase Authentication, Firestore, and Google Cloud backend services.
- Completed UI/UX prototyping, feature development, debugging, and iterative quality enhancements; awarded EXCELLENT rating — highest of 5 evaluation tiers — by MindMatrix internship coordinators.

PROJECTS

Mini Log Analytics Platform *Python · Docker · PostgreSQL · FastAPI · Alembic · ETL*

- Architected a production-grade, 4-microservice log analytics platform using Docker Compose: a continuous JSON log emitter (every 2s), a checkpoint-based ETL pipeline (5-min batch), PostgreSQL 15 with Alembic schema migrations, and a FastAPI + Uvicorn query API.
- Implemented end-to-end data engineering pipeline — structured log ingestion → transformation → relational storage → REST querying — with pytest + coverage for all service layers, replicating enterprise-scale observability architecture.

Lextria Task Manager (Real-Time SaaS) *React · TypeScript · Supabase · PostgreSQL · @dnd-kit*

- Engineered a real-time team Kanban dashboard with zero-latency optimistic UI: React state updates applied instantly before database confirmation, with automatic graceful rollback on failure, delivering a 0ms-perceived-latency user experience.
- Integrated Supabase Realtime Channels to push live PostgreSQL mutations to all connected clients simultaneously; designed a relational schema (departments → boards → agents → tasks) with cascading FK constraints and UUID primary keys.

Pneumonia Detection System (Deep Learning) *Python · TensorFlow · Keras · MobileNetV2 · OpenCV · Streamlit*

- Trained and benchmarked two architectures — a custom CNN (Conv2D + MaxPooling + Dropout) and MobileNetV2 Transfer Learning — for binary chest X-ray classification, with data augmentation (rotation, zoom, horizontal flip) to address class imbalance.
- Evaluated models via confusion matrices, accuracy/loss curves, and confidence scores; deployed as an interactive Streamlit web app accepting image uploads and returning real-time predictions.

Fake News Detection System (NLP) *Python · Scikit-learn · TF-IDF · Logistic Regression · Streamlit*

- Built a complete NLP pipeline — text preprocessing → TF-IDF vectorization → Logistic Regression classifier — achieving 98.5% accuracy on a labeled news dataset; deployed as a live Streamlit web application.
- Managed the full ML lifecycle: data cleaning, feature engineering, model evaluation (precision / recall / F1), and version-controlled deployment via GitHub.

Sahyadri Samrakshane (Android) *Kotlin · Jetpack Compose · MVVM · Dagger Hilt · Room · Supabase · Firebase*

- Built a citizen-science Android app for wildlife incident reporting in the Western Ghats, structured with MVVM + Clean Architecture, Dagger Hilt dependency injection, Kotlin Coroutines & Flow for async, and Jetpack Navigation Compose.
- Implemented Firebase Auth, Supabase (PostgreSQL) real-time sync, Room Database for offline-first operation, Android WorkManager for background synchronisation, and a GPS LocationTracker — enabling seamless use in remote forest areas without connectivity.

EDUCATION

B.E. in Artificial Intelligence & Data Science · SMVITM, Udupi (VTU)

2022 – 2026

CGPA: 7.44 / 10

12th · Vidyodaya PU College (State Board) | 10th · Vidyodaya Public School (ICSE)

2022 | 2020

CERTIFICATIONS

- Android App Development with Generative AI** · MindMatrix / VTU · ID: Mx26INT02937 (2026)
- Exploratory Data Analysis for Machine Learning** · Great Learning (2025)
- UI/UX Design for Beginners · Market Research & Business Analytics** · Great Learning (2025)
- Python Programming Fundamentals** · Kakunje Software (2025)
- REST API Design Workshop** · SMVITM (2025)
- C Programming** · M.I.C.E (2023)

ACHIEVEMENTS

- Rated EXCELLENT (highest of 5 tiers) by MindMatrix for GenAI internship performance — Feb–May 2026.
- Secured 2nd Place in Line Follower Robot Competition — hardware-software integration under competition constraints.
- Active contributor across 3 Hackathons / Ideathons with deployable AI prototypes (Years 1–3, SMVITM).
